

YEFTA CHRISTIAN NATHANIEL

Electronic Technician | Industrial Maintenance & Troubleshooting
Semarang, Indonesia | +62 851-5700-3677 | yeftabit@gmail.com
LinkedIn: Yefta Christian Nathaniel | Portfolio: yeftchris.github.io

PROFESSIONAL SUMMARY

Electronics Engineering (D3) graduate from Politeknik Negeri Semarang, BNSP-certified Industrial Automation Technician, with hands-on industrial experience in preventive and predictive maintenance, diagnostics, and repair of electronic and electrical equipment. Six-month internship at PT Djarum Kudus performing maintenance and refurbishment of industrial control modules, function testing, and troubleshooting using electrical and electronic schematics. Computer-literate, safety-conscious, and comfortable following structured work processes and documenting maintenance activities. Available for shift work, field assignments, and site rotation.

CERTIFICATIONS & TRAINING

BNSP Certificate of Competence — Industrial Automation Technician Sep 2025 (valid 3 years)
Reg. No. INA.C.248 00175 2025 | Issued by LSP Politeknik Negeri Semarang, BNSP

- Competency units: Operating Programmable Logic Controller (PLC); Maintaining Electrical Equipment; Maintaining Pneumatic Equipment; Building Electrical Equipment and Systems; Maintaining Workplace Environment; Maintaining Effective Workplace Relations.

Industrial Internship / Practical Work Certificate — PT Djarum Kudus Feb 2026

EDUCATION

Politeknik Negeri Semarang Semarang, Indonesia
Diploma (D3) in Electronics Engineering | GPA: 3.55/4.00

Final Project: Design and Development of a Mini Modular Production System as a PLC-Based Automated Sorting Trainer Kit (Omron CP1E)

INDUSTRIAL EXPERIENCE

PT Djarum Kudus Aug 2025 – Jan 2026
Industrial Internship | Maintenance Operation Secondary, MEXT 8 / Refurbish

- Performed preventive and predictive maintenance, diagnostics, and refurbishment of industrial control modules and electronic/electrical equipment.
- Conducted function testing to verify equipment readiness after maintenance and repair.
- Read and interpreted electrical and electronic schematics, drawings, and prints to identify and troubleshoot faults in control modules.
- Worked with Industrial PCs and Beckhoff-based control components, including Profibus DP communication hardware and industrial power supplies.
- Assisted in panel assembly and electrical wiring based on industrial schematics.
- Worked with proximity sensors, rotary encoders, PLC systems, relays, and pneumatic actuators.
- Restored system images using CF cards and disk-imaging tools, and documented maintenance activities in accordance with workplace procedures and safety requirements.

FINAL PROJECT

PLC-Based Automated Sorting Trainer Kit (Omron CP1E) Politeknik Negeri Semarang

- Retrofitted an existing Mini Modular Production System (Mini MPS) trainer from a microcontroller-based system to an Omron CP1E PLC.
- Integrated inductive and capacitive proximity sensors, fiber-optic sensing, pneumatic actuators, solenoid valves, relays, and limit switches; diagnosed and resolved solenoid valve pilot failures after extended inactivity.
- Developed PLC ladder logic in CX-Programmer; performed function testing and troubleshooting of the sorting sequence using electrical schematics.
- Validated the system in a 1-hour continuous run: 188 of 201 workpieces sorted successfully (about 93.5%), with average cycle times of roughly 17.6–18.5 seconds per workpiece.

TECHNICAL SKILLS

Maintenance & Diagnostics: Preventive/predictive maintenance, fault diagnostics, function testing, equipment repair and refurbishment

Electrical & Electronics: Reading electrical/electronic schematics and drawings, wiring, control panels, relays, power supplies, troubleshooting

Industrial Automation: Omron CP1E PLC, CX-Programmer, ladder logic, sensors, actuators, pneumatic systems

Industrial Systems: Industrial PC, CF/SSD storage, control modules

Computer Literacy: MS Office, technical documentation and data recording, Arduino IDE, Simulink, LabVIEW, Proteus

ADDITIONAL INFORMATION

Available for shift work, field assignments, and site rotation. Safety-conscious with a systematic approach to troubleshooting; comfortable following detailed, structured work processes and documentation requirements, and working both independently and as part of a team in industrial/field environments.
